Summary

Data analyst with experience developing statistical models, predictive simulations, and interactive visualizations to evaluate player and team performance. Skilled in Excel, Tableau, R, and SQL, with experience translating complex analyses into actionable insights for coaches, athletes, and decision-makers.

Education

Saint Joseph's University

(Expected July 2027)

Master of Science in Business Intelligence & Analytics

Lafayette College

May 2025

Bachelor of Arts in Mathematics and German (dual major): Concentration in Statistics, Minor: Data Science

Technical Skills

- **Programming:** R, SQL
- **Statistical Methods:** Regression Analysis, Bayesian Modeling, Monte Carlo Simulation, Hypothesis Testing
- **Visualization:** Plotly, Tableau, Excel
- **Tools:** GitHub, RStudio, Google Sheets
- **Technology:** FlightScope

Experience

All-Star Sports Academy

May 2026-present

FlightScope Data Analyst Intern

West Chester, PA

- Operate FlightScope performance tracking systems during tournament events and showcases.
- Analyze player tracking data including exit velocity, launch angle, carry distance, pitch velocity, and spin rate to support player evaluation and development.
- Track longitudinal athlete performance to identify developmental trends.
- Create player performance summaries and reports for coaches and athletes, translating raw data into actionable insights.
- Manage player profiles, roster information, and exported datasets to maintain accurate records and streamline reporting workflows.

Lafayette Men's Basketball

August 2024-May 2026

Manager of Coaching Analytics

Easton, PA

- Built and maintained multi-season player and game-level datasets containing 20+ contextual performance variables.
- Developed linear, logistic, and ordinal regression models to evaluate player efficiency, lineup effectiveness, and performance trends.
- Created and implemented a 50,000+ simulation Monte Carlo simulation framework to project season outcomes and conference tournament probabilities, providing probabilistic forecasts to support coaching strategy and decisions.
- Designed interactive shooting dashboards in R to communicate analytical findings and support coaching decisions.
- Automated data preparation and reporting workflows in Excel and R, reducing processing time by 50%.
- Led a team of seven undergrad student analysts responsible for data collection and quality assurance.

Global Career Accelerator

May 2024-July 2024

Excel & Tableau Trainee

Horsham, PA (remote)

- Analyzed consumer datasets using Excel and Tableau to identify behavioral and operational trends.
- Conducted A/B testing and statistical analyses to evaluate business performance.
- Developed dashboards and visualizations to communicate insights to stakeholders.

Selected Research & Analytics Projects

Bayesian Analysis of MLB Offensive Performance

- Conducted an independent Bayesian analysis using MCMC methods to evaluate whether torpedo bat usage improved MLB batting average, on-base percentage, and slugging percentage between the 2024 and 2025 seasons, quantifying uncertainty through posterior distributions and credible intervals.

Grammy Website Analytics

- Analyzed Google Search trends surrounding the Grammy Awards to identify shifts in consumer interest and engagement, simultaneously benchmarking against a competitor website, and presenting findings through interactive visualizations and statistical summaries

Intel Data Center Site Selection Dashboard

- Created a Tableau dashboard analyzing energy availability and sustainability profiles in different regions over time to support the selection of a new Intel data center.

Publications/Presentations

- Featured in The Lafayette for developing large-scale simulation models used to project season and tournament outcomes.
